Introduction

• This presentation aims to provide an overview of the variation in health and social care outcomes within Medway across a wide range of indicators.

• For more in-depth understanding of these issues and the actions being taken or considered to address them, please visit the Medway JSNA website (www.medwayjsna.info).

• It is data-driven drawn from the best available sources. Ideally, this should be complemented by local knowledge and experience before generating any firm conclusions.
Key messages

• Bullet point list of main findings
Lower super output areas explained

- Lower Super Output Areas (LSOAs) are small geographical areas containing around 1,600 people.
- There are 163 in Medway with an average population of around 1,600 people. They are much smaller than Electoral Wards.
- If based on GP practice hubs LSOAs have been assigned to an area of interest on the basis of whether a majority of the residents are registered with a general practice in the area of interest.
- There are six LSOAs in Lordswood and Capstone ward.
Throughout these slides, bright pink has been used to identify LSOAs in the area. Grey has been used for the rest of Medway.

The maps have been shaded in a consistent way to show the 20% of LSOAs with the worst outcomes in the darkest colour graded to the lightest colour for the areas with the best outcomes.

The box and whisker plots show the spread of values within the LSOAs assigned to the area compared with other areas. The boxes represent the 25th and 75th percentiles, the whiskers are the minimum and maximum and the dots are outliers. The areas have been placed in descending order of the median to give a sense of rank.
• Some of the information in this presentation is based on data from GP practices and therefore relates to the registered population.

• Other information comes from sources that relate to the resident population. The resident population is the population of people who live in the Medway area.

• The Registered population consists of people registered with GP practices in Medway, who may or may not live in Medway.

• Most people who live in Medway (residents) are registered with a Medway GP practice, but some are registered with practices outside of Medway.

• The difference between the registered and the resident population needs to be kept in mind when examining these data.
